Emerging tech dissected by technologists

3 common pitfalls of microservices integration— and how to avoid them

How to overcome the challenges of remote communication, asynchronicity, and transactions in microservices infrastructure

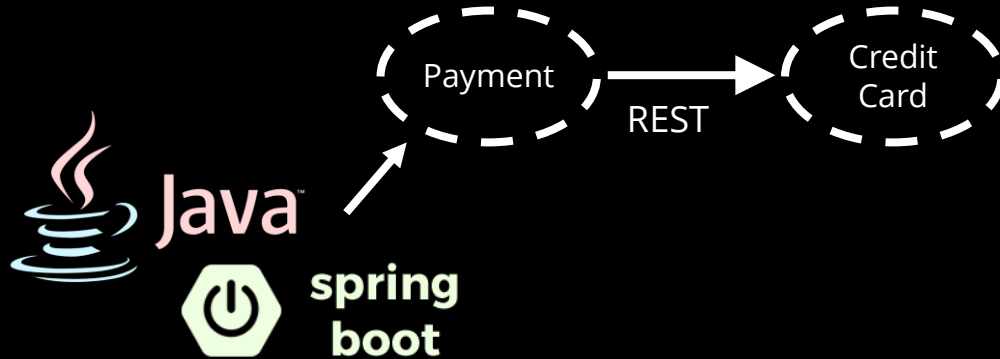

Failure will happen.
Accept it!

But keep it local!
Be resilient.

Let's start with a simple example

BERND RUEC

We're sorry

We are having some technical difficulties at the moment.

Please log on again via www.easyjet.com

If that doesn't work, please try again in five minutes.

We do actively monitor our site and will be working to resolve the issue, so there's no need to call

[Go to easyJet.com](http://www.easyjet.com)

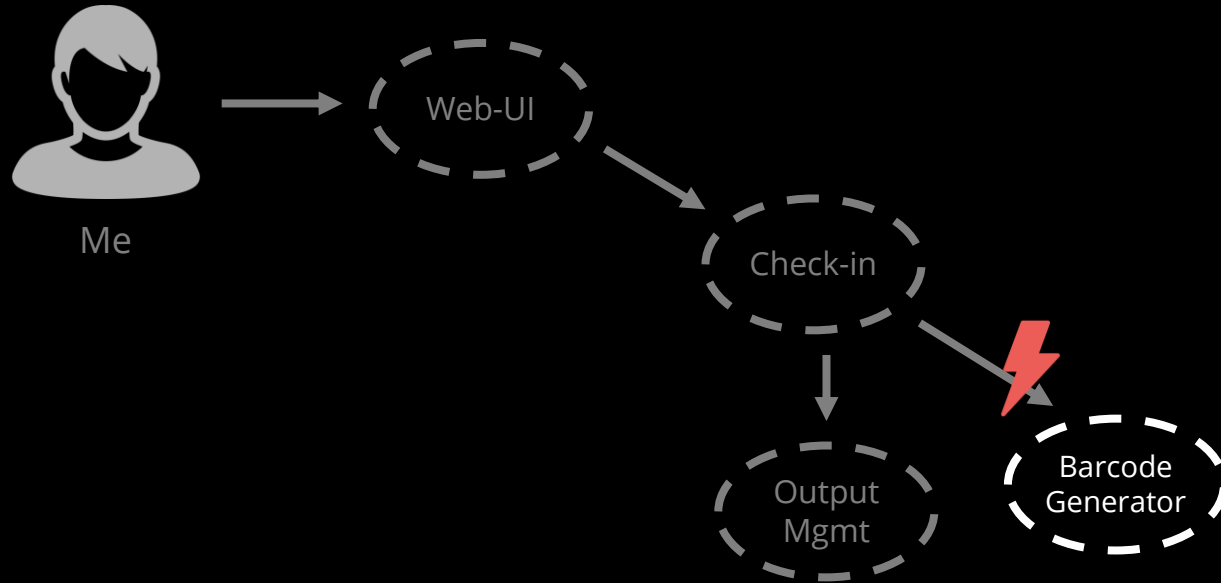

...I just made this up...

We're sorry

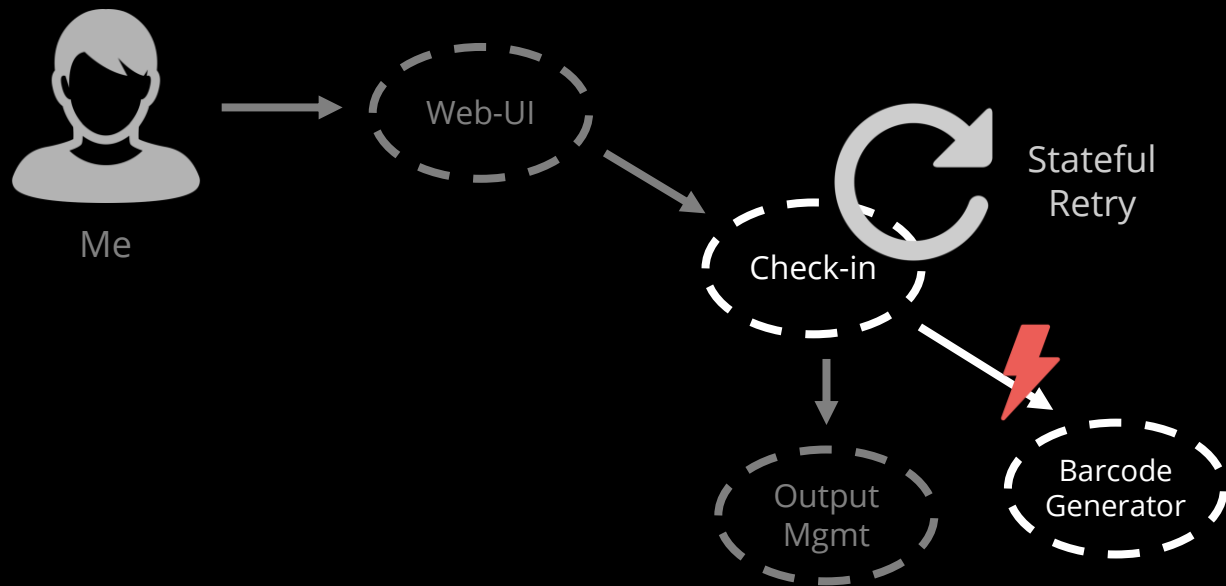

We are having some technical difficulties and cannot present you your boarding pass right away.

But we do actively retry ourselves, so lean back, relax and we will send it on time.

Possible situation – much better!

and asked (translated into my own words and

hestrating two or three CRUD-Services to do
architects want to use your workflow engine for this
workflow? Currently we run one big central cluster for the workflow engine—
won't this get a mess?"

These are valid questions which recently we get asked a lot, especially in the
context of microservices, modern SOA initiatives.

Life beyond Distributed Transactions: an Apostate's Opinion

Position Paper

Pat Helland

Amazon.Com
705 Fifth Ave South
Seattle, WA 98104
USA

PHelland@Amazon.com

The positions expressed in this paper are personal opinions and do not in any way reflect the positions of my employer Amazon.com.

ABSTRACT

Many decades of work have been invested in the area of distributed transactions.

Instead, applications are built using different techniques which do not provide the same transactional guarantees but still meet the needs of their businesses.

This paper explores and names some of the practical approaches used in the implementation of these applications.
